

#### **Key Points**

This Market Information Report is relevant for tenders submitted in Jul-18 for delivery in Aug-18.

Tenders from eligible service providers for Firm Frequency Response should be submitted on Mon 02-Jul-18 (1st business day) for all tenders.

National Grid will notify service providers of the outcome of the tender assessment, and preliminary nominations, by Tue 17-Jul-18 (12<sup>th</sup> business day).

# From January 2018, non-compliant tenders will be rejected prior to assessment.

Providers must use the template provided in the Ariba system to tender in for FFR. Use of any other template or submissions via e-mail will not be accepted.

Please note that this is a month ahead only tender. Tenders should therefore be submitted for **Aug-18** delivery.

The details regarding the dates, times and dial in details for the upcoming FFR Result WebEx can be found here.

This Market Information Report provides information to FFR providers on the requirement for the Jul-18 tender (TR 103) for delivery in Aug-18.

### Requirements for Aug-18 (TR 103)

#### **Primary Response:**

A primary dynamic requirement exists in EFA blocks 1 and 2. With no primary nondynamic market in existence, procurement of this volume in EFA blocks 3 to 6 will instead be opened up to the dynamic market.

#### **Secondary Response:**

A secondary dynamic requirement exists in EFA blocks 1 and 2. For the remaining EFA blocks in the day, the dynamic requirement for secondary response has been satisfied.

A non-dynamic requirement exists across all 6 EFA blocks. In the instance where this requirement cannot be filled in the non-dynamic market, the volume will be opened up to be satisfied in the dynamic market.

#### **High Response:**

A high response requirement is present across EFA blocks 3 to 6.

A breakdown of the outstanding requirement for this tender round can be found in Appendix 1. A full breakdown of the long-term requirements can be found in Appendix 1 in the excel file.

Please note that submitted tenders must have a minimum window availability of 4 hours in line with EFA blocks.

#### **Market Updates**

### Simplification of FFR

FFR Auction Trial

Ahead of the FFR auction trial in which weekly FFR procurement will be undertaken, a portion of the dynamic and non-dynamic FFR requirement will be transferred from the monthly tenders to the weekly auction. The exact volume is to be determined and further information will be provided once confirmed.

For further information please contact your account manager or:

# New

5 explanatory videos have been unloaded to the National Grid website. Each video focuses on a different element of Frequency response as a balancing service, how Electricity National Control Centre makes use of it and how the Firm Frequency Response assessment is undertaken.

To view the videos, click on the linked images below.

#### Video 1

#### EFA Block Procurement

From tender round 101, the standardisation outlined in the Product Road Map will take effect. Volume will no longer be procured by settlement period. Procurement will instead take place across the standard 6 EFA blocks. Tenders must therefore only start, and end, at the following times: 2300, 0300 0700 1100 1500 1900.

The minimum requirement across each specific EFA block will determine how much volume will be procured for each of the 6 daily 4 hour blocks.

Any outstanding shape will be satisfied, where necessary closer to real time by the Electricity National Control Centre.

#### **Contract Duration**

Tenderers will only be able to submit for fixed monthly, quarterly and seasonal durations. The graphic below provides a breakdown of the possible tender structures for this round.

Please note that providers can submit tenders for any of the individual seasons in isolation (i.e. Summer 2019, Summer 2020). Tenders must however provide a continuous service. This means that a tender offering a service in July-2018 and Winter 2018 will be deemed as non-compliant as there is not a continuous service with the remaining months in the quarter beginning in July (August-2018 and September 2018) being omitted.

#### **Testing**

Continuing on from tender round 100, providers will be required to have successfully passed FFR testing of their asset prior to tendering in for month ahead requirements. E.g. If tendering to provide a FFR service starting on 1st July, the unit must have passed testing prior to the tender submission window closing on the 1st business day in June. Tenders that do not meet this requirement will be deemed non-compliant and will be automatically rejected.

#### Limiting tenders

Providers are limited to submitting 2 tenders per unit, per tender period. A tender period is considered to be; month ahead, quarter ahead and per season. All or nothing bids will be considered as 1 tender submission.

#### Jul-18 FFR Delivery

55 active FFR contracts are due to provide FFR in Jul-18. These contracts are made up of:

- 24 dynamic contracts
- 31 non-dynamic contracts
- 1 contracts by BMU providers
- 54 contracts by NBMU providers

#### **Key messages**

#### Tender rejection codes

The table below provides guidance as to the reasons why a tender has been rejected. They can be matched against the numbers in the 'Reason Code' section of the Post Tender Report. Please note that reason 1 has been updated. The new commentary will apply from TR 103 onwards.

#### FFR service Overview

nationalgrie Firm Frequency Response (FFR) service overview

Interactive guidance document

**Product Roadmap** 

This document sets out the actions to be taken forward for frequency response and reserve markets and details the principles that will govern the way that balancing services are procured in future.

No.	FFR Reason Code	Comment	
1	Beneficial	While the price submitted was considered beneficial, on this occasion this tender was not accepted for one of the following reasons:  1.1. The outstanding or desired procurement requirement has already been satisfied by more beneficial tenders  1.2. There was no outstanding requirement The desired volume against the National Grid procurement strategy for future tender months had already been satisfied  1.4. This tender formed part of an all-ornothing group which did not collectively deliver enough benefit to be considered	
2	Price not beneficial across tendered period	The price submitted was too high and did not provide any contract benefit against alternative actions including the mandatory and optional market.	
3	Does not meet tender prerequisites	Please refer to the 'Technical Parameters' section using the following link to determine the criteria necessary to participate in the FFR market	

#### Enhanced Frequency Response (EFR)

100% of EFR is included in the requirements from July 2018.

### Procured Volume

When determining which tenders to accept, National Grid will take account of its planned procurement strategy. In general, a measured approach is taken to determine the appropriate volume to procure throughout the duration of the tender.

# **Appendix 1: Aug-18 Requirement Volume Tables**

#### Dynamic FFR requirements for TR 103

EFA Block	Dynamic response required (MW)			
	Primary	Secondary	High	
1	238	100	0	
2	238	100	0	
3	0	0	33	
4	0	0	33	
5	0	0	36	
6	0	0	33	

#### Non-Dynamic FFR requirements for TR 103

EFA Block	Non-Dynamic response required (MW)			
	Primary	Secondary	High	
1	0	68	0	
2	0	83	0	
3	205	167	0	
4	261	175	0	
5	85	142	0	
6	71	140	0	

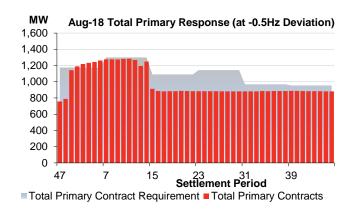

#### **Appendix 2: Aug-18 Requirements**

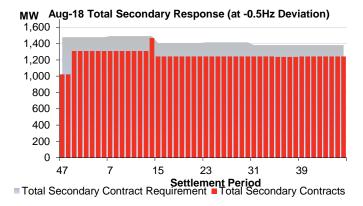

The three charts below display the volume of frequency response left to contract for the month ahead against the total response requirements. The red bars represent existing contracted service provision (both dynamic and non-dynamic) including any optional non-FFR services routinely used that NG forecast to be cost effective for the month ahead. The grey shaded area is the remaining volume to contract.

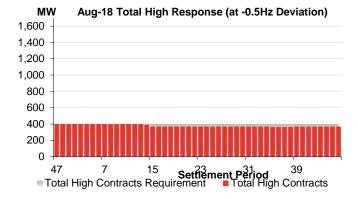

For month ahead, the requirement will be taken from either dynamic or non-dynamic providers where deemed economic to do so. Please note that where volume in the non-dynamic market cannot be satisfied, this volume may instead be procured in the dynamic market. With no primary Non-Dynamic market in existence, procurement of this volume in EFA blocks 3 to 6 will instead be opened to the dynamic market.

The breakdown of the requirement against dynamic and non-dynamic response can be seen in the tables in appendix 1.

In the move to standard EFA block window durations, the minimum of the total requirement across each EFA block outlines the level to be procured. In light of this transition, the minimum dynamic requirement still remains a key component to be satisfied and outstanding volume against this will continue to be procured for operational purposes. For Aug-18, this is highlighted in the table above.

### Appendix 4: Historical Profile of Firm Frequency Response (FFR) Value

The following information provides a historical overview of FFR value variation during the last two years. A breakdown of the relative values of Primary, Secondary and High Response over the same two years is also provided. This study is based on historical data taken from 1 October 2015 to 30 September 2017. It is the same data used to calculate the costs reported within the Monthly Balancing Services Summary and for the avoidance of doubt is not a forecast of future value variation.

The FFR assessment principles document highlights that the main economical assessment of the value of individual FFR tenders is based upon the following costs:

- Cost of alternative service holding fees
- Cost of alternative utilisation (Bid Offer Acceptances)
- Cost of alternative margin services (BM Offers)

As the profile across the day is different across these three alternative actions, the costs have been combined for reasons of simplicity. It is important however, to note that the assessment has to use forecasts for some of these alternative costs. The assessment therefore has to take account of the associated uncertainty with using forecasts when considering the value of any tender for any time period. From this point, the document will refer to the value of FFR.

The relative values shown in Figures 1 and 2 provide a comparison of every settlement period relative to each other.

The lower, average and upper relative values for each of the 48 settlement periods that make up daily cost have been calculated and plotted in Figure 1 (summer) and Figure 2 (winter). Periods of low and high value are highlighted in Figure 1. Higher value periods are typically a result of the use of alternative margin services, especially notable in the winter during Settlement Periods 33-39.

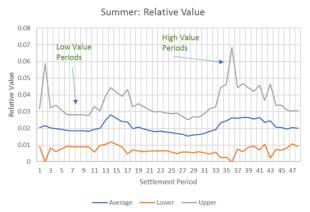

Figure 1: Proportional Value of FFR by Settlement Period (Summer)

The following is an example of how FFR values are assessed. In Figure 2, for Settlement Period 17, the average relative value is approximately 2% while for Period 35, the proportional value is approximately 4%. The interpretation is therefore that period 35 is 2 times more valuable than Period 17.

The breakdown of the Primary, Secondary and High Response values over the same time period are included in the Appendix in Table 1 (summer) and Table 2 (winter).

This breakdown shows that during the winter overnight settlement periods (33-41) there is a larger share of value in Secondary Response with 70-75% which reflects the value provided from margin.

Contrast this to the summer, during overnight settlement periods (3-12) there is a significant proportion of value in High Response (40-45%). This is because demand is likely to be low, resulting in a greater requirement and hence value of high response.

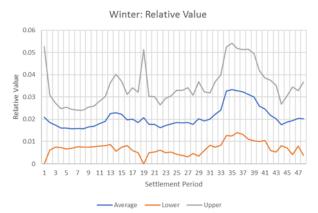

Figure 2: Relative Value of FFR by Settlement Period (Winter)

# **Appendix 5: Proportional Value of FFR by Settlement Period**

The tables below provide the background data to figures 1 and 2 above. This data is also contained in Appendix 5 of the excel file.
