

# **Guidance for the Process of Implementation of RfG and other Codes into GB Code Structure**

**Paper for discussion by GC0048 Working Group**

**19 May 2015**

**by Mike Kay and Rob Wilson**

Following presentations of the structure of Distribution and Grid Code documentation to manage RfG implementation in GB at the March GC0048 and JESG in April 2015, it is intended to seek guidance for the immediate next steps in implementation.

The need to seek guidance arises because of the desire to effect GB implementation as soon as possible after the RfG enters into law in order to afford maximum time to industry participants and equipment manufacturers for compliance.

To continue to make progress, certain decisions will need to be made on banding and document structure. The legal framework to make these decisions is not well established, certainly in advance of the RfG entering into law. This paper therefore seeks guidance on how concrete steps can still be taken.
