Commentary

The market was swinging between long and short throughout the day as large amounts of wind and interconnector movements impacted the system. Some trades were carried out on the interconnectors in the morning for positive margin and additional response was held in the evening. Numerous trades were done throughout the day on the interconnectors to deal with ROCOF issues overnight, along with some BM unit trades, and to deal with South East constraints through the day. Some BM actions were also taken to assist this constraint. Significant BM actions on wind, hydro and conventional units were also taken to resolve constraints in Scotland, the North East and the South. Further trading was required to resolve some localised constraints in Scotland.
