

Date: **Monday 26 Aug 2019**

BSUoS Charge Estimate: £2.41/MWh
Total Outturn: £2.36m

Daily Balancing Costs

- BM Cost (Indicative)
- AS Cost (Estimate)

Western Link status: Available

Commentary

The market was prevalently short throughout the 24 hours, in excess of 600MW short between the morning and the evening. Between the afternoon and the evening multiple trades on the interconnectors were taken for positive margin. Around 260MW of STOR was run during the late evening to chase the demand profile. During the day, BM Actions were required to solve power flow restrictions in Scotland and in England due to planned outages. Overnight, the voltage levels in England were managed with trades on generating units, RoCoF was secured for most of the day with trades on the interconnectors.
