Commentary

The market started long and changed to short during the morning peak and trades were carried out for margin between 7:30am and 9am. 300MW of STOR was run between 6am and 10am. An additional 300MW of STOR was run between 4:30pm and 7:30pm.

Overnight interconnector trades were enacted for RoCoF. BM Actions were required for voltage management in the south although due to high wind (3.5GW) that had to be bid off, the units were used for energy purposes as well.
