

Code Administrator Meeting Summary

CMP317 Identification and exclusion of Assets Required for Connection when setting Generator Transmission Network Use of System (TNUoS) charges And CMP327 Removing the Generator Residual from TNUoS Charges

Date: 22 January 2020

Contact Details

Chair: Rob Marshall , National Grid ESO

Rob.Marshall@nationalgrideso.com
07824 518958

Proposer: Jon Wisdom, National Grid ESO

Jon.Wisdom@nationalgrideso.com

Key areas of discussion

The Workgroup discussed the following:

- Since the previous workgroup meeting, the workgroup was asked to look into business rules for the various modular solutions which had been discussed in prior meetings. The workgroup stepped through draft business rules from the proposer for the original solution. Business rules will also be developed for any potential alternative solutions in due course.
- The issue of defining generator only spurs was also a key point of the meeting. Two potential definitions were developed in addition to the original proposal. At a high level, these three definitions include;
 - i) All local circuits and local substations
 - ii) Local circuit and local substations required only by a single generator
 - iii) Local circuit and local substations required only by a single generator, at their time of connection

These three definitions will be continued to be developed throughout the workgroup process.

- The potential impact on TNUoS tariffs was also discussed. The ESO will consider what analysis can be incorporated in the workgroup consultation.
- Following the workgroup, the workgroup consultation was circulated for review ahead of publication.

Actions Log

Number	Action	Status
5	JW to investigate if a map/diagram is available that shows the typography of MITS in relation to the network and circulate	Open
9	ESO to update diagrams shared with workgroup showing physical assets required for connection	Open
11	Workgroup members to send their definition of proposed solutions, justification for them and any work on quantifications they are able to provide	Open
12	Ofgem to advise whether the reference node can be included in scope of CMP317 and CMP327 solutions, or whether it falls within the scope of the Access and Forward Looking Charges SCR	Open
14	All to consider business rules	Open
15	ESO to conduct tariff analysis	Open
