

Triads 2020/21

In accordance with the Connection and Use of System Code (CUSC), the Triads for each charging year are calculated and published by National Grid Electricity System Operator using net system demand data (based on the latest available settlement metering) for each half hourly settlement period between November and February inclusive.

The Triads are the three half-hour settlement periods of highest net system demand on the GB electricity transmission system between November and February (inclusive) each year, separated by at least ten clear days. The Triads are used to determine TNUoS demand charges for customers with half hourly meters (see Section 14 of the CUSC).

The Triads for 2020/21 are:

Date	Settlement Period	Net System Demand (MW)
7 th December 2020	35	44,449
7 th January 2021	36	45,450
10 th February 2021	37	44,997

Please see Appendix 1 for details of the half-hour settlement period of highest net system demand for each day between 1st November 2020 and 29th February 2021.

For more information about the Triads, please see our latest guide at this [link](#).
