

# CMP361 – BSUoS Fixing – Potential Drax Alternative

## A Possible Alternative solution.....

Compared to the Original, we believe this potential alternate would be more beneficial to suppliers and better meet the CUSC objectives...

A volumetric (£/MWh) BSUoS tariff with 9 month notice and 6 month fixed period.

- Tariffs would be set in July and come into effect from the following April to the end of September.
- Tariffs would be set in January and come into effect from October to the end of March in the following year.
- One BSUoS rate for the entire 6 month period.

Any under or over recovery would be factored into future fixed periods and still be subject to the notice.

Whilst we appreciate the ESO's financeability concerns, we do not propose a cap on the ESO's total over and under recovery.

- No mid fixed period changes to the BSUoS rate.
- No restricting payments of to balancing services providers.

No intentional over recovery when setting tariffs.

Regular updates from the ESO on over / under recovery and forecasts of the BSUoS rate for future periods before the tariff is set would provide further certainty of BSUoS costs for suppliers.
