

T&T Model Training Videos

Transport and Tariff Model

The Transport and Tariff (T&T) model calculates Transmission Network Use of System Charges (TNUoS) consistent with the methodology set out in the CUSC (Section 14, Part 2, Section 1)

We publish the T&T model which allows users to undertake their own sensitivity analysis of generation and demand tariffs under different scenarios.

There is no charge for the model, but we do require parties that wish to use it to sign a licence agreement first so please [contact us](#) if you wish to receive a copy of the model.

Periodically we run webinars to train people how to use the T&T model, the videos below are from the last training session that we ran.

The days training has been split up into 3 separate videos to remove the lunch and other breaks that we took during the session. There are some sections of the videos where there may be no talking as we are allowing participants time to complete a particular exercise.

To stay updated on when we will be running the next live training session, please [subscribe to our mailing list](#) for TNUoS related news.
