

# NGESO RTE Trading

Due to French electricity system conditions, NGESO is unable to trade on the interconnectors joining GB and France. For more information, please look at the RTE data sharing website [here](#).

NGESO communicates with the connected TSOs. On some occasions trades cannot be accepted on particular Interconnectors due to constraints within neighbouring TSOs. On these occasions NGESO will remove these bids/offers in the auction even where the volume is cheaper than on alternative interconnectors.

NGESO will not be sharing details of these arrangements with RTE but please see the RTE website for details.
