## Commentary

A short market in the early morning and over the late afternoon to evening period. Interconnector Trades were required for Margin overnight and during the morning, and for Response throughout the day. Trades managed thermal import constraints along the South Coast and South East of England in the morning and from late afternoon onwards, and alleviated thermal export constraints in Scotland over the morning. BM Action was required for thermal export constraints in Scotland at the start of the day and during the afternoon. All overnight Voltage requirements met by the market.
