BSUoS Charge Estimate: £2.39/MWh

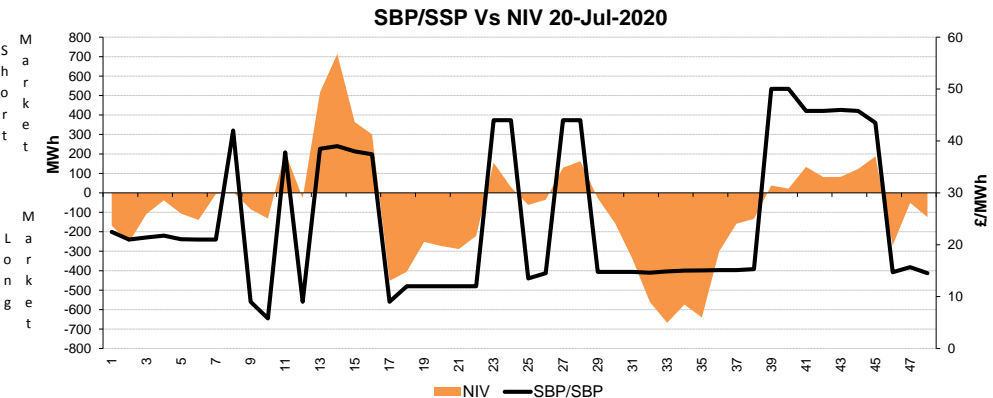

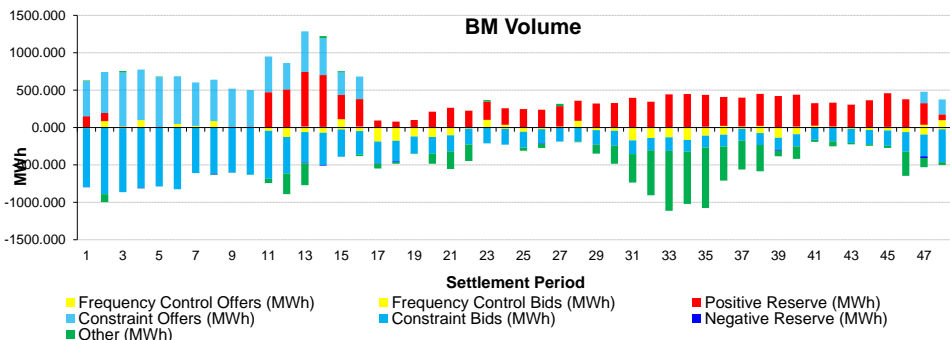

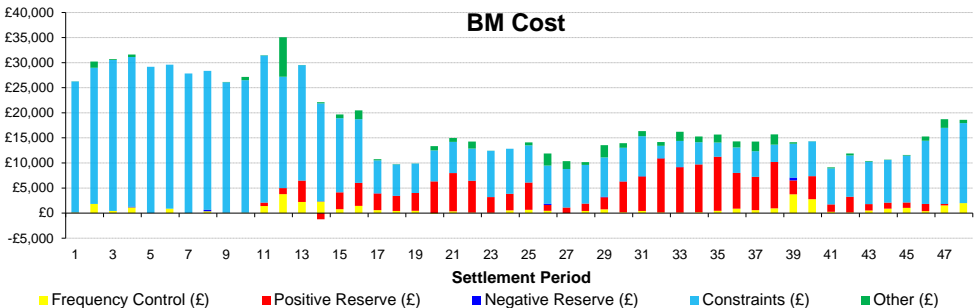

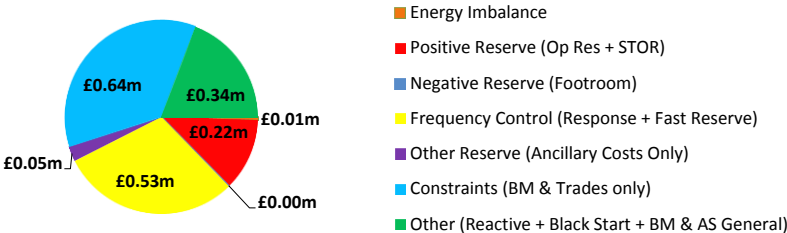

Total Outturn: £2.25m

■ BM Cost (Indicative)

■ AS Cost (Estimate)

Daily Balancing Costs

Commentary

The day was a mostly long market with short positions over the morning, lunchtime and evening peaks. Wind generation outturned 300MW lower than forecast in the morning and small BMUs were instructed to run. 400MW of BMUs were also used over the evening peak. Trades were also carried out for margin.

North Scotland constraints were active during the middle part of the day. Overnight trades were done for RoCoF. BM Actions were used for voltage support.
