BSUoS Charge Estimate: £3.59/MWh
Total Outturn: £3.93m

BM Cost (Indicative)
AS Cost (Estimate)

Daily Balancing Costs

Commentary

The market was short in excess of 1000MW in the morning and intermittently short between the afternoon and the evening.

BM actions were required from the afternoon onwards to solve power flow restrictions in Scotland due to high wind levels. A mix of BM actions and multiple trades on interconnectors were taken between the early morning and midnight to solve import constraints in the South East of England. Overnight, voltage levels were managed in England with offers accepted in the BM and trades undertaken on generating units, and RoCoF risk was mitigated with a mix of BM actions and trades on the interconnectors.
