Commentary

The market was short overnight and into the day. It was long over the late afternoon, becoming short again over the evening.
Interconnector Trades throughout the day, along with some BM actions morning onwards, were required to manage thermal import constraints in the South East. BM Actions were required briefly early morning for thermal constraints in the North East and Scotland area, and from mid afternoon to evening in the North. Trading and BM Actions assisted with overnight Voltage Support, and System Inertia.
