BM Cost (Indicative)

AS Cost (Estimate)

## Commentary

The market was short between the early morning to the mid afternoon. Interconnector Trades were required for Margin from morning until the evening. 260MW of Non-BM Fast Reserve was run over the late afternoon alongside 58MW of STOR.

Trades managed thermal import constraints in the South East of England over the morning, and in the afternoon and evening period. BM Action alleviated thermal export constraints in Scotland during the day, especially from early evening onwards. All overnight Voltage requirements were met by the market.
