### Commentary

A mostly long market overnight into midday, becoming mostly short from mid afternoon onwards. Interconnector Trades were required for Downward Regulation between 5am and 6am, and for Margin over the morning peak and mid afternoon period. Overnight Trades and BM Action supported Voltage Control in the Midlands and South East of England. BM Action overnight for System Inertia. BM Action managed thermal export constraints in the North of Scotland and the North of England throughout the day, with the majority of action required overnight and into the morning.
