

The triads are calculated in accordance with the Statement of Use of System Charging Methodology (See Section 14 of the Connection and Use of System Code.) They are based on the latest settlement data available when the triad was calculated in March 2013, as illustrated by the run type. (SF = Settlement Final; R1 = Reconciliation 1; R2 = Reconciliation 2)

Wednesday 12th December 2012 had the highest half hour average demand of 55,313MW between 17:00 and 17:30 and was therefore a triad. No further triads could have occurred between 2nd and 22nd December 2012, inclusive, due to the ten clear day rule.

The next highest half hour average demand of 54,819MW occurred on Wednesday 16th January 2013 between 17:00 and 17:30 and was therefore a triad. No further triads could have occurred between 6th and 26th January 2013, inclusive, due to the ten clear day rule.

The next highest half hour average demand of 52,381MW occurred on Thursday 29 November 2012 between 17:00 and 17:30 and was therefore a triad.

2012-13 Triads

Date	Day	Half Hour Ending	Settlement Period	Demand	Settlement Run
01-Nov-12	Thursday	17:30	35	48,284	R2
